

**MECH 303**  
**Machine Design**

**Project Presentation**

- A member of each group will make a short presentation. You should discuss the steps of your design and how you are going to execute these steps in your presentation. You should also have a clear understanding of the design problem discussed in the project and state this problem at the beginning of your presentation.
- Attendance to the project presentation is mandatory.
- You will be given only 10 minutes for the presentation. You will be stopped if you exceed 10 minutes. Hence, you should use your time wisely.
- You should prepare your presentation and place them to the shared folder before the presentations start. You will not be allowed to make any file transfer in between the presentations.
- The number of the slides should be between 5 and 10, but no more than 10. The slides should describe a roadmap (flowcharts, diagrams, and figures) for the solution and they should not include any specific calculations.
